

I respectfully urge you, the FCC, to reject the NAB's petition 04-160. Satellite radio is a wonderful innovation in that it provides flexibility and specific choice of programming over a broad area where traditional service is otherwise unobtainable and with high quality signals. The provision of traffic and weather services particular to various urban areas is a great plus for travelers and can keep the cost of the service within reach of more folks. Please don't constrain satellite radio's ability to provide service...let's see what they can do.

Roane Lacy, Jr.
